

Antonio Leo

tonysoccerleo@gmail.com – 613-402-7995 – Ottawa, Ontario

Summary

Detail-oriented developer with experience building client-side systems and debugging complex software using C++, C#, and JavaScript supported by formal training in Game Development and Computer Science. Proven ability to debug, maintain, and integrate features within existing codebases. Experience documenting complex codebases and organizing code architecture. Passion for problem solving and debugging. Strong collaboration in multidisciplinary teams using Git and Jira, communicating technical ideas clearly, and contributing effectively in fast-paced development environments.

Relevant Education

Algonquin College, Ottawa – Game Development

2023 – 2026

- C++, C#, JavaScript, Technical Documentation, Unreal Engine, Unity, GitHub, Jira, 3ds Max, Adobe Tools.

Carleton University, Ottawa – Bachelor of Computer Science

2021 – 2023

- JavaScript, C, C++, Python, Java, Discrete Structures, Game Development, Linear Algebra, HTML Web Applications.
-

Relevant Experience

Capstone Project (C++/Unreal Engine 5)

Almost a Dozen Studios, Algonquin College

2025 – 2026

- Collaborated with a multidisciplinary team of 11 designers, programmers, and artists to develop a playable video game during an 8-month production cycle
 - Implemented and maintained client-side gameplay systems and tools in UE5 using C++
 - Detected, diagnosed, and resolved logic errors and runtime issues in complex codebases
 - Analyzed system behavior to identify technical issues and performance constraints
 - Contributed to structured system design and feature integration within an existing codebase
 - Wrote technical documentation for new and updated software features
 - Used GitHub for version control and Jira for issue tracking and project coordination
-

Functional Skills

System Analysis & Debugging

- Detecting and resolving logic and runtime errors
- Debugging complex software systems and gameplay logic
- Analyzing technical problems and system constraints
- Troubleshooting interactions between multiple systems
- Identifying root causes of software issues

Software Architecture & Code Organization

- Object-Oriented Programming (C++, C#, JavaScript)
- Designing modular systems and structured codebases
- Organizing features within large existing codebases
- Understanding system architecture and component interaction
- Developing logical system specifications

Technical Documentation & Design

- Writing and maintaining Technical Design Documents
- Documenting system architecture and feature behavior
- Creating UML diagrams for system design
- Translating technical requirements into documentation
- Maintaining documentation for updated software features

Version Control & Team Collaboration

- Collaborative development using Git/GitHub
- Task tracking and coordination using Jira
- Participating in technical discussions and code reviews
- Communicating technical ideas clearly within multidisciplinary teams
- Working effectively in structured development workflows

Employment History

Vittoria Trattoria, Ottawa – Busser

2024 - Now

Nepean Hotspurs Soccer Club Ottawa – Recreational Youth Soccer Coach

2023

Moxies Bar and Grill, Ottawa – Busser/Server

2022 - 2023
